

# DUCT TAPE TOTE BAG

# DUCT TAPE TOTE BAG

## Materials:

- Duct tape (choose your favorite colors or patterns!)
- Scissors
- Stapler and staples
- Ruler or measuring tape

1. To get started, cut strips to the width you'd like the bag to be. Slightly overlap them and press along that seam. Repeat to make another panel for the other side of the bag.

2. Set the two panels aside and make two handles. To do this, cut three strips to the length you'd like the handle to be. Then cut one in half lengthwise. (this is a test of how awesome the scissors are—to be able to cut along a long length of tape is great).

3. Put a piece of the cut strip in the middle of a non-cut strip, as shown below—this helps reinforce the handle. Then fold the stick parts over and press them down. Repeat with the other strip so that you now have two handles.

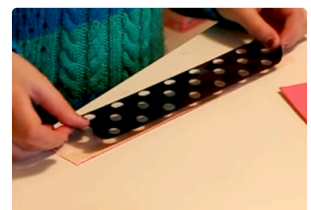

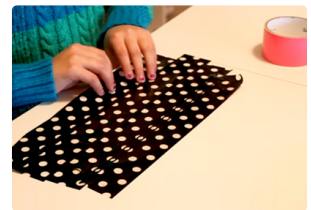

4. On each prepared panel, put the handle into place as shown.

5. Now, take more strips and use them to cover the exposed sticky side. You can overlap a little on the edges.

6. Then trim off the overlap edges after you flip it over:

7. Now with the two bags sides together, tape the bottom and side edges together as shown.

8. That's it! See, you can make this! Once everything is secure, your tote bag is ready to carry your Camp gear, crafts, or snacks!
